

Running Track

Features of EPDM running track--Made with EPDM and glue,

1. Moderate elasticity
2. The wear resistance is strong, which can ensure the long-term stability of pavement structure
3. the aging resistance will not be affected by ultraviolet radiation, ozone and wind and rain, resulting in fading and powdering.
4. Impact resistance
5. Smooth, easy to construct, sun proof and antiskid
6. EPDM plastic stadium can be paved even if the foundation is poor, and the water permeability is good
7. It can be used all-weather for more than 10 years
8. Easy to maintain, easy to clean and reduce maintenance cost by 40%
9. Green environmental protection: health and non-toxic, safe and environmental protection, durable;

Item	Name	Picture	Description	Dimensions
1	Runing track Bitumen base		EPDM Style	5mm
2	Runing track Concrete base			
3	Runing track Bitumen base			8mm
4	Runing track Concrete base			
5	Runing track Bitumen base			12mm
6	Runing track Concrete base			

7	Runing track Concrete base	 	Breath Style	13mm

Features of breathable plastic track: --Made of EPDM , glue and Polyurethane surface adhesive.

1. Excellent weather resistance, not easy to aging.
2. The elasticity is stable, and there is no difference in elasticity throughout the year. It will never be hard in winter and soft in summer.
3. It emphasizes the comfort and safety of athletes and helps them to play or improve their performance.
4. Emphasis on the overall performance of the runway, to adapt to various events and long-term competition training.
5. The paint is not easy to fall off, the color is bright, does not fade, and the wear resistance is better.
6. The flatness meets the standard of IAAF, and the water filtering property is good. There is no need to stop the competition in light rain days, and the competition can be carried out immediately after heavy rain without ponding.
7. Compared with compound plastic runway and mixed plastic runway, the cost of breathable plastic runway is generally about 15% lower than compound plastic runway and 28% lower than mixed plastic runway.

Legal Name DHARUNAN WORLD
Trade Name ,if any DHARUNAN WORLD

8	Runing track Concrete base	 HEPU one-component hybrid runway	Component hybrid runway-New Glue style	13mm
9			Component hybrid runway-Double material	
10	Runing track Concrete base	 HEPU all-plastic runway	All-plastic runway	13mm

Features of Component hybrid runway (made of epdm +elastic glue+ Polyurethane surface adhesive) and All- plastic track (elastic glue and Polyurethane surface adhesive):

1. Environmental protection: all plastic high elastic plastic runway materials are non-toxic, pollution-free and meet the requirements of environmental protection;
2. All weather usability: it can maintain high quality in any season and temperature difference environment, and can be put into use immediately after rain
3. Elasticity: it has moderate elasticity and resilience, which can not only reduce the consumption of physical strength, but also improve the performance of competition;
4. Good impact absorption: the mixed track can moderately absorb the impact of athletes' feet, which can not only reduce sports injury, but also suitable for long-term practice
5. Weatherability: it will not fade, pulverize or soften due to the pollution of ultraviolet, ozone and acid rain, and can keep its bright color for a long time
